# China and the US Trade Deficit: Who Gains from a Rise in the Yuan?

# lan Sheldon Andersons Professor sheldon.1@osu.edu

Department of Agricultural, Environmental & Development Economics

#### China's Trade

- Growth in merchandise trade surplus
- Rose to \$262 billion in
   2007 11% of GDP
- Some appreciation of yuan against \$ 14% since July 2005

- U.S. bilateral trade deficit with China running at over \$230 billion
- Accounts for almost a third of total US trade deficit
- Members of Congress argue this is due to Chinese manipulation of its currency
- However, revaluation of yuan would probably benefit China more than US

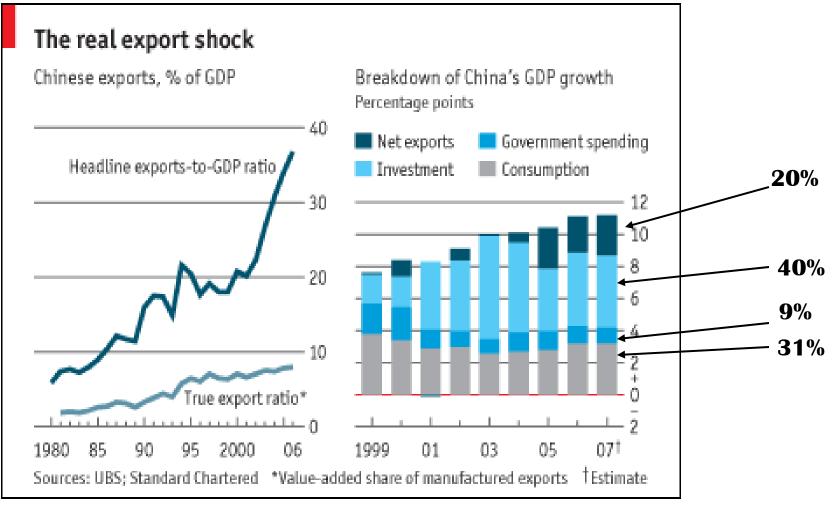

#### China's Economic Growth

- China has grown at 10% a year in real terms since 1978
- Currently world's 4<sup>th</sup> largest economy, and 3<sup>rd</sup> largest trader
- Concern among Chinese leadership that growth path is unsustainable
- Outsiders argue it is contributing to global economic imbalances

#### China's Economic Growth

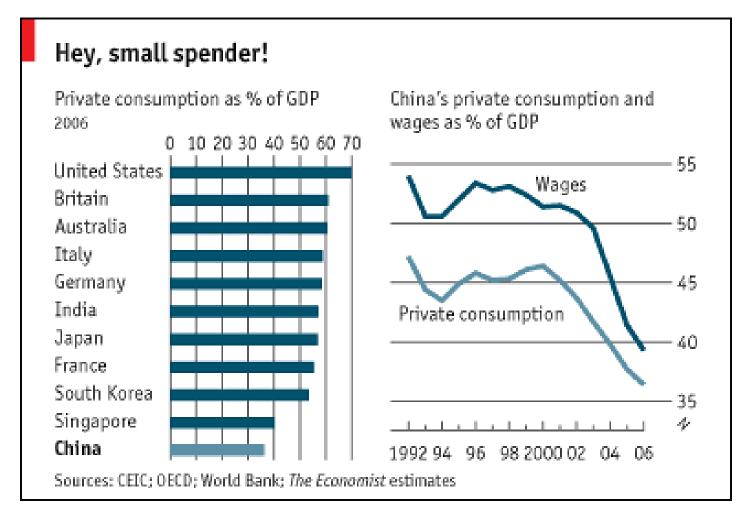

- China's growth has largely been driven by investment not exports
- High total savings 42% of GDP, households (16%), firms (20%), government (6%)
- Chinese consumption very low by international standards

## **China's Low Consumption**

#### Why Rebalance China's Growth?

- **Low productivity of investment**
- Depressed wages
- **lncome** inequality
- Regional inequality
- **Environmental harm**

#### How to Rebalance?

- **Reduce investment**
- ♦ Fiscal policy to reduce precautionary savings and raise consumption:
  - provision of health care, education
  - universal pension coverage
- Adopt flexible exchange rate regime
  - import more/export less
  - better able to set interest rates

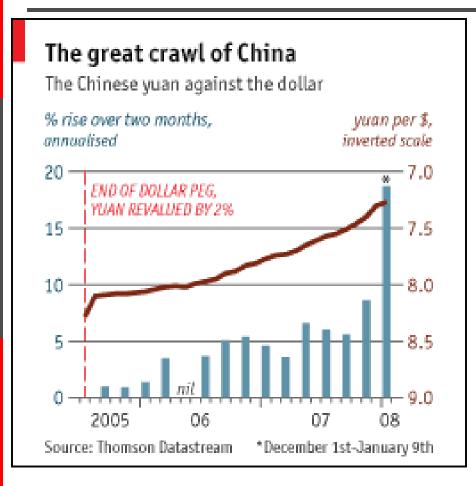

## China's Exchange Rate

- Many observers argue yuan is significantly undervalued:
  - no improvement in trade balance
  - China's foreign exchange reserves continue to grow \$1.43 trillion
  - "sterilizes" inflows by printing yuan, buying up \$, and selling low-yielding government bonds

## China's Exchange Rate

- China allowing faster appreciation 13% a year
- Increasing inflation especially imported food/raw materials
- Increasing cost of maintaining yuan due to higher relative yields in China

## **US and China's Currency**

<b>�</b>	<b>US Trade Deficit (%)</b>	1985	2004
	China	0	24
	Japan/Hong Kong		
	Korea/Taiwan	<b>52</b>	16

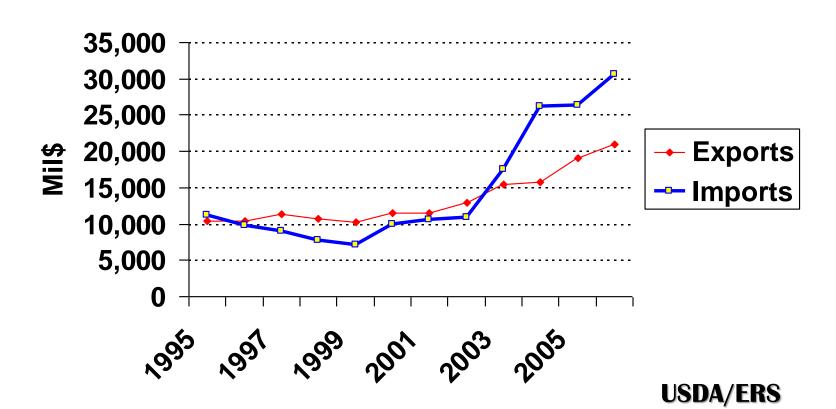

- China at end of East Asian supply chain
- Only 20% of export value captured by China, and has trade deficit of \$130 billion with East Asia
- ♦ 20% appreciation of yuan would reduce US trade deficit by only \$40-55 billion

#### China agricultural imports and exports

## **US-China Agricultural Trade**

- ♦ US has agricultural trade surplus with China \$6.7 billion in 2006
- **Occupies** Concentrated in soybeans and cotton
- Appreciation of yuan would improve competiveness of US agriculture
- China would import more wheat, and possibly import corn

- Appreciation of yuan would reduce Chinese exports of labor-intensive horticultural crops
- Reduce production of field crops using scarce resources such as land and water
- Would hurt Chinese farmers, but help rural and urban consumers

#### **China Needs Appreciation**

- **♦ To rebalance growth, has to address external imbalance**
- Independent monetary policy
- **To get resources out of export sector**
- With appreciation in other Asian currencies, "orderly correction" of US external imbalance

- **Output** China wants to move at its pace
- US Congress convinced yuan is being manipulated
- China and other Asian countries need to let currencies appreciate
- US should raise its savings rate
- Probably requires international cooperation brokered by the IMF
