

## PRICES AND EQUILIBRIUM

## Professor Ian Sheldon

Suppose consumer A has endowments of fruit and fish:

$$
\text { fruit }=\omega_{A}^{1}, \text { fish }=\omega_{A}^{2}
$$

Their prices are:

$$
\text { fruit }=\mathbf{p}^{1} \text {, fish }=\mathbf{p}^{2}
$$

Consumer A's wealth $\mathbf{I}_{\mathrm{A}}$, given endowment and prices is:

Consumer A can now buy and sell goods 1 and 2 at prices $\mathbf{p}^{1}$ and $\mathbf{p}^{2}$, so the expression for wealth $\mathbf{I}_{\mathbf{A}}$ can be thought of as a budget line.

Think of consumption of goods 1 and 2 as opposed to endowments:

$$
\mathbf{I}_{\mathrm{A}}=\mathbf{p}^{1} \mathbf{x}_{\mathrm{A}}^{1}+\mathbf{p}^{2} \mathbf{x}_{\mathrm{A}}^{2}
$$

where $\mathbf{x}_{\mathrm{A}}$ and $\mathrm{x}_{\mathrm{A}}^{2}$ are consumption of goods 1 and 2 respectively

## Re-arranging $I_{A}$ :

$$
\begin{aligned}
& \mathbf{p}^{2} \mathbf{x}_{\mathrm{A}}^{2}=\mathbf{I}_{\mathrm{A}}-\mathbf{p}^{1} \mathbf{x}_{\mathrm{A}}^{1} \\
& \mathbf{x}_{\mathrm{A}}^{2}=\frac{\mathbf{I}_{\mathrm{A}}}{\mathbf{p}^{2}}-\frac{\mathbf{p}^{1}}{\mathbf{p}^{2}} \mathbf{x}_{\mathrm{A}}^{1}
\end{aligned}
$$

where $I_{A} / \mathbf{p}^{\mathbf{2}}=$ the intercept of the budget line
and $p^{1 /} \mathbf{p}^{2}=$ the slope of the budget line
(See next figure)

## BUDGET LINE

Budget line: $\mathbf{x}^{2}{ }_{A}=I_{A} / \mathbf{p}^{2}-\mathbf{p}^{1 /} \mathbf{p}^{2} \mathbf{x}^{1}{ }_{A}$

## EQUILIBRIUM AND BUDGET LINE

## CHANGE IN PRICES AND EQUILIBRIUM
