**Prepared for Great Decisions Program
Columbus Council on World Affairs (October 2008)**

China's Growth

- ❖ **China has grown at 10% a year in real terms since 1978**
- ❖ **By end of 2008, expected to be world's 3rd largest economy, and 2nd largest trader**
- ❖ **Concern among Chinese leadership that growth path is unsustainable**
- ❖ **Outsiders also argue it is contributing to global economic imbalances**

China's Trade

- ◆ **Growth in merchandise trade surplus**
- ◆ **\$262 billion in 2007 – 11% of GDP**
- ◆ **Some appreciation in yuan/\$ - 18% since July 2005**
- ◆ **Trade surplus stable in 2008 – 9% of GDP**

China - US Trade

- ❖ **U.S. bilateral trade deficit with China running at over \$230 billion in 2007**
- ❖ **Accounted for almost a third of total US trade deficit in 2007**
- ❖ **Members of US Congress argue this is due to Chinese “manipulation” of its currency**
- ❖ **However, appreciation of yuan will likely benefit China more than US**

US and China's Currency

◇ <u>US Trade Deficit (%)</u>	1985	2007
China	0	32

Rest of East Asia	52	17
--------------------------	-----------	-----------

- ◇ China at end of East Asian supply chain**
- ◇ Only 20% of export value captured by China - has trade deficit of \$130 billion with East Asia**
- ◇ 20% appreciation of yuan would likely reduce US trade deficit by only \$40-55 billion**

Basis of China's Growth

- ❖ **Expansion of an economy based on $\Delta \text{GDP} = \Delta \{C + G + I + (X - M)\}$**
- ❖ **China's growth, until recently, driven by investment *not* net exports**
- ❖ **Investment based on high total savings – 42% of GDP, households (16%), firms (20%), government (6%)**
- ❖ **Chinese consumption has been quite low by international standards**

Why Rebalance China's Growth?

- ❖ **Low productivity of investment**
- ❖ **Depressed wages**
- ❖ **Rural-urban income inequality**
- ❖ **Regional inequality**
- ❖ **Environmental damage**

How to Rebalance?

- ◆ **Reduce investment**
- ◆ **Fiscal policy to reduce precautionary savings and raise consumption:**
 - **provision of health care, education**
 - **universal pension coverage**
- ◆ **Change macroeconomic policy**
 - **flexible exchange rate regime**
 - **better able to set interest rates and control inflation**

China's Exchange Rate

- ❖ **China continues to intervene in foreign exchange market – yuan/\$ appreciation stopped July 2008**
- ❖ **Foreign exchange reserves still growing - \$1.8 trillion by mid-2008**
- ❖ **Net result – increased liquidity in Chinese banking system**
- ❖ **People's Bank of China (PBC) forced to “sterilize” inflows to prevent inflation**

Capital Inflows to China

China's hot potato

\$trn

- Total increase in foreign-exchange assets*
(of which reported reserves)
- Estimated hot-money inflow

*Adjusted for CIC transfers, Central Huijin options, swaps and bank reserve requirements

Macroeconomic Policy

- ❖ **Tying Chinese inflation to exchange rate will make sustainable growth harder**
- ❖ **Independent monetary policy also inconsistent with exchange rate policy**
- ❖ **As capital account becomes more open, harder to target inflation**
- ❖ **Also requires reform of Chinese banking sector, i.e., proper use interest rates as opposed to financial repression**

Macroeconomic Policy

- ❖ **China should switch from fixed exchange rate to inflation-targeting**
- ❖ **Targeted range for rate of inflation**
- ❖ **Key focus of monetary policy is inflation**
- ❖ **Benefits: price and employment stability, tying down of inflation expectations**
- ❖ **Requires strong fiscal, financial and monetary institutions**

Inflation Targeting

- ◆ **There has to be fiscal stability, i.e., no large government deficits**
- ◆ **If large deficits – either have to be underwritten through increase in money supply or eroded via currency devaluation**
- ◆ **Monetary policy cannot be subservient to fiscal policy – “fiscal dominance”**

Inflation Targeting

- ❖ **Also necessary to have a sound financial system, especially banking sector**
- ❖ **If banking sector is weak, central bank will be constrained in its ability to raise interest rates**
- ❖ **Fear of provoking a collapse of financial system – “financial dominance”**
- ❖ **Serious issue in many developing countries**

Inflation Targeting

- ◆ **Will policy work in China?**
- ◆ **No obvious problem of fiscal dominance
– fiscal deficit and government debt low**
- ◆ **However – there are unfunded liabilities
in banking system, i.e., non-performing
loans**
- ◆ **Banking system requires further reform**

China Needs to Rebalance

- ◆ **To rebalance growth, China must address internal/external imbalances**
- ◆ **Independent monetary policy**
- ◆ **Allow exchange rate to appreciate**
- ◆ **Other Asian currencies will also appreciate – allowing for “orderly correction” of US external imbalance**

How to Get Global Adjustment

- ◆ **China wants to move at its pace**
- ◆ **US Congress convinced yuan/\$ is being manipulated**
- ◆ **China and other Asian countries need to let currencies appreciate**
- ◆ **US should raise its savings rate**
- ◆ **Not clear what impact of current financial crisis will be**
